Portland, OR | 909.815.1079 | [wesley.spikes@gmail.com](mailto:wesley.spikes@gmail.com) | [LinkedIn](#)

## SUMMARY

---

An accomplished software engineer and architect. I have a passion for leadership, security, and mentoring. I seek out challenges as opportunities for growth, handle ambiguous and fluid situations well, and can break down complex problems into creative solutions with actionable tasks.

## TECHNICAL STRENGTHS

---

<b>Computer Languages</b>	Go, Python, Bash, SQL, $\text{\LaTeX}$
<b>Operating Systems</b>	Linux (CentOS, Gentoo, Ubuntu), OS X

## EXPERIENCE

---

### Squarespace

Remote

*Senior Software Engineer*

December 2017 – March 2020

- Successfully kept services online during a 3,000% spike in traffic (really) from our Super Bowl ad, fewer than 3 months into the job (February 2018); gathered requirements from all teams, architected and built a specialized frontsite cache, and coordinated testing of functionality across all engineering teams (Python)
- Architected and built a black box caching system for all customer websites; increased responsiveness from the CMS and reduced the number of requests to the application by 60%, resulting in the reduction of HW requirements to run the platform (Go, Python, Perl)
- Built a Varnish module to offload security operations onto the cache layer (C)
- Designed and built a system ensuring reliable broadcast of cache invalidation requests to all cache nodes; 98% of invalidation requests were processed by all cache nodes within 1.2 seconds (Go, Java)
- Built a robust Database User and Role Management; tooling had a full load, plan, request approval, then apply lifecycle; generated change plans were shipped to a central source for compliance and auditing (Python)
- Managed the sunseting of early TLS support, including communication with stakeholders (Java)

### DreamHost

Los Angeles, CA

*Senior/Lead Software Engineer*

October 2014 – August 2016

- Leadership and Mentoring: Managed two direct reports; involved in technical hiring
- Architecture: Technical lead on the API2, Malware Remover, VPS-SSD, DreamPress 2 projects
- Infrastructure: Automated system configuration for 50K machines using Chef and an in-house system
- Core Dev: Major contributions to the foundations and billing of an old codebase (1997)
- Security: Post-exploit incident response; reported several notable issues

*Software Engineer*

January 2011 – October 2014

- Projects: Dedicated Servers, CafeCommerce
- Testing and CI: Created testing framework and practices, along with supporting CI processes
- Git Transition: Significant contributor in transition from subversion to git
- Research and Documentation: Created documentation detailing the intricacies of the fraud detection systems

*Technical Support*

November 2009 – January 2011

At the time, DreamHost only hired graduates from Harvey Mudd College for roles on the development teams. I joined the Support team with the goal of eventually joining the dev teams, with the full support the VP of Support (I was open and honest about this goal in the interview process). Within 6 months, I was writing utilities for the support teams. A few months later, I was working 50% of the time with the dev team.
